IMAGES

WB (Western Blot)

Detection of human TFEB by western blot. Samples: Whole cell lysate (50 ug) from HeLa and HEK293T cells prepared using NETN lysis buffer. Antibody: Affinity purified rabbit anti-TFEB antibody AAA212255 (lot AAA212255-3) used for WB at 0.1 ug/ml.

Detection: Chemiluminescence with an exposure time of 10 second.

IP (Immunoprecipitation)

Detection of human TFEB by western blot of immunoprecipitates. Samples: Whole cell lysate (1.0 mg per IP reaction; 20% of IP loaded) from HeLa cells prepared using NETN lysis buffer. Antibodies: Affinity purified rabbit anti-TFEB antibody AAA212255 (lot AAA212255-3) used for IP at 6 ug per reaction. TFEB was also immunoprecipitated by rabbit anti-TFEB antibody and rabbit anti-TFEB recombinant monoclonal antibody. For blotting immunoprecipitated TFEB, was used at 1:1000. Detection: Chemiluminescence with an exposure time of 75 seconds.

ADDITIONAL INFORMATION

Related Product Information for anti-TFEB antibody	Transcription factor EB (TFEB) specifically recognizes and binds E-box sequences (3'-CANNTG-5'). Efficient DNA-binding requires dimerization with itself or with another MIT/TFE family member such as TFE3 or MITF. In association with TFE3, TFEB activates the expression of CD40L in T-cells, thereby playing a role in T-cell-dependent antibody responses in activated CD4+ T-cells and thymus-dependent humoral immunity. TFEB specifically recognizes and binds the CLEAR-box sequence (5'-GTCACGTGAC-3') present in the regulatory region of many lysosomal genes, leading to activate their expression; thus, TFEB plays a central role in expression of lysosomal genes. TFEB also specifically recognizes the gamma-E3 box, a subset of E-boxes, present in the heavy-chain immunoglobulin enhancer [taken from the Universal Protein Resource (UniProt) www.uniprot.org/uniprot/P19484].
