ChIP (Chromatin Immunoprecipitation)
Binding at pause site of the Jun B gene. Chromatin isolated from one 15 cm plate of HeLa cells was immunoprecipitated with 8.0 ug of anti-RNA polymerase II antibodies and PCR amplified.

IP (Immunoprecipitation)
Detection of human RNA Polymerase II by western blot of immunoprecipitates. Samples: Whole cell lysate (1.0 mg per IP reaction; 20% of IP loaded) from HeLa cells prepared using NETN lysis buffer. Antibodies: Affinity purified rabbit anti-RNA Polymerase II antibody (AAA212673 lot 2) used for IP at 6 ug per reaction. RNA Polymerase II was also immunoprecipitated by a previous lot of this antibody (AAA212673 lot 1) and a second antibody against a different epitope of RNA Polymerase II antibody . For blotting immunoprecipitated RNA Polymerase II, was used at 1 ug/ml. Detection: Chemiluminescence with an exposure time of 75 seconds.

ADDITIONAL INFORMATION

Related Product Information for anti-POLR2A antibody	RNA polymerase II is a DNA-dependent RNA polymerase that catalyzes the transcription of DNA into RNA using the four ribonucleoside triphosphates as substrates. RNA polymerase II subunit B1 (RPB1) is the largest and catalytic component of RNA polymerase II which synthesizes mRNA precursors and many functional non-coding RNAs. It forms the polymerase active center together with the second largest subunit [taken from NCBI Entrez Gene (Gene ID: 5430)].
