IMAGES

WB (Western Blot)

Detection of human Phospho STAT3 (S727) by western blot. Samples: Whole cell lysate (50 ug) from HeLa, HeLa (IFNalpha), Jurkat, Jurkat (IFNalpha), and NCI-H226 cells prepared using NETN lysis buffer. Antibody: Rabbit anti-Phospho STAT3 (S727) recombinant monoclonal antibody (AAA213617 lot 1) used at 1:1000. Secondary: HRP-conjugated goat anti-rabbit IgG . Detection: Chemiluminescence with an exposure time of 10 seconds. Lower Panel: Rabbit anti-COPB2 antibody .

IP (Immunoprecipitation)

Detection of human Phospho STAT3 (S727) by western blot of immunoprecipitates from HeLa cells treated with IFN-alpha (100 ng/mL). IPs were treated (+) or mock treated (-) with phosphatase. Antibodies: Rabbit anti-STAT3 recombinant monoclonal antibody used for IP at 20 ul/mg lysate. For blotting immunoprecipitated Phospho STAT3 (S727), AAA213617 was used at 1:1000. Detection: Chemiluminescence with an exposure time of 30 seconds. Lower Panel: Total STAT3 antibody .

ADDITIONAL INFORMATION

Related Product Information for STAT3 recombinant antibody	STAT3 (signal transducer and activator of transcription 3) is a member of the STAT protein family. In response to cytokines and growth factors, STAT family members are phosphorylated by the receptor associated kinases, and then form homo- or heterodimers that translocate to the cell nucleus where they act as transcription activators. This protein is activated through phosphorylation in response to various cytokines and growth factors including IFNs, EGF, IL5, IL6, HGF, LIF and BMP2. This protein mediates the expression of a variety of genes in response to cell stimuli, and thus plays a key role in many cellular processes such as cell growth and apoptosis. The small GTPase Rac1 has been shown to bind and regulate the activity of this protein. PIAS3 protein is a specific inhibitor of this protein [taken from NCBI Entrez Gene (GeneID:6774)].
