ADDITIONAL INFORMATION

Related Product Information for anti-PHF6 antibody	PHF6 a member of the PHD (plant homeodomain)-like zinc-finger family of proteins and is suggested to function as an important transcription factor. PHF6 is ubiquitously expressed and localizes to the cell nucleus with prominent expression in the nucleolus. Expression in the nucleolus indicates an importance to ribosome biogenesis. Mutations in PHF6 are the cause of Borgeson-Forssman-Lehman syndrome (BFLS), an X-linked syndrome characterized by mental retardation, hypogonadism, hypometabolism, obesity, gynecomastia, and several forms of facial anomalies.
