

# Mouse Insulin Like Growth Factor Binding Protein 4 (IGFBP4) RTU ELISA Kit | IGFBP4 rtu elisa kit

Mouse Insulin Like Growth Factor Binding Protein 4 (IGFBP4) ELISA Kit

|                               |                            |
|-------------------------------|----------------------------|
| CATALOG #<br><b>AAA216207</b> | REACTIVITY<br><b>Mouse</b> |
|-------------------------------|----------------------------|

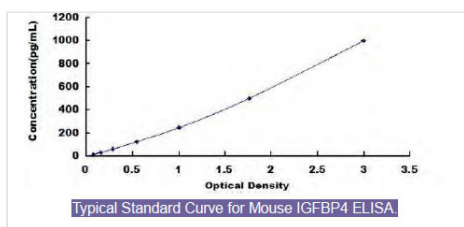

## PRODUCT SYNONYMS

Insulin Like Growth Factor Binding Protein 4 (IGFBP4); Mouse Insulin Like Growth Factor Binding Protein 4 (IGFBP4) ELISA Kit; BP4; HT29-IGFBP; IBP4; IGFBP4 rtu elisa kit

## PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Mouse                                                                                                                                                                                                                                                                                                                                               |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of IGFBP4. No significant cross-reactivity or interference between IGFBP4 and analogues was observed.                                                                                                                                                                       |
| Sequence Length         | 254                                                                                                                                                                                                                                                                                                                                                 |
| Samples                 | Serum, plasma, tissue homogenates, cell lysates, cell culture supernates or other biological fluids                                                                                                                                                                                                                                                 |
| Assay Type              | Quantitative Sandwich                                                                                                                                                                                                                                                                                                                               |
| Detection Range         | 15.6-1000pg/mL                                                                                                                                                                                                                                                                                                                                      |
| Sensitivity             | < 6.4pg/mL                                                                                                                                                                                                                                                                                                                                          |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level IGFBP4 were tested 20 times on one plate, respectively. Intra-Assay: CV<10%                                                                                                                                                                            |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level IGFBP4 were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%                                                                                                                                          |
| Preparation and Storage | For unopened kits: All the reagents should be kept at 4 degree C upon receipt.<br>For opened kits: Once the kit is opened, the remaining reagents still need to be stored according to the above storage conditions. In addition, return the unused wells to the foil pouch containing the desiccant pack and reseal along entire edge of zip-seal. |

ADDITIONAL INFORMATION

|                                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Related Product Information for IGFBP4 rtu elisa kit | <p>Intended Uses: The kit is a sandwich enzyme immunoassay for the in vitro quantitative measurement of IGFBP4 in mouse serum, plasma, tissue homogenates, cell lysates, cell culture supernates or other biological fluids.</p> <p>Principle of the Assay: The microtiter plate provided in this kit has been pre-coated with an antibody specific to IGFBP4. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to IGFBP4. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain IGFBP4, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm +/- 10nm. The concentration of IGFBP4 in the samples is then determined by comparing the O.D. of the samples to the standard curve.</p> |
