ADDITIONAL INFORMATION

Related Product Information for fT3 elisa kit	Intended Uses: This ELISA kit applies to the in vitro quantitative determination of Mouse fT3 concentrations in serum, plasma and other biological fluids. Principle of the Assay: This ELISA kit uses the Competitive-ELISA principle. The micro ELISA plate provided in this kit has been pre-coated with Mouse fT3. During the reaction, Mouse fT3 in the sample or standard competes with a fixed amount of Mouse fT3 on the solid phase supporter for sites on the Biotinylated Detection Ab specific to Mouse fT3. Excess conjugate and unbound sample or standard are washed from the plate, and Avidin conjugated to Horseradish Peroxidase (HRP) are added to each microplate well and incubated. Then a TMB substrate solution is added to each well. The enzyme-substrate reaction is terminated by the addition of stop solution and the color change is measured spectrophotometrically at a wavelength of 450 nm +/- 2 nm. The concentration of Mouse fT3 in the samples is then determined by comparing the OD of the samples to the standard curve.
