

Mouse Renin (REN) RTU ELISA Kit | REN rtu elisa kit

Mouse Renin (REN) ELISA Kit

CATALOG #
AAA218162

REACTIVITY
Mouse

PRODUCT SYNONYMS

Renin (REN); Mouse Renin (REN) ELISA Kit; angiotensinogenase; REN rtu elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Sequence Length	402
Assay Type	Sandwich
Samples	Serum, Plasma or Other Biological Fluids.
Detection Range	1.56-100pg/mL
Sensitivity	0.65pg/mL
RTU ELISA Kit's Advantage	The Ready-To-Use (RTU) Kits require fewer steps in setup and take less time to run. Detection Solutions are pre-diluted and total incubation time is shorter than many other ELISA Kits.
Preparation and Storage	For unopened kits: All the reagents should be kept at 4 degree C upon receipt. For opened kits: Once the kit is opened, the remaining reagents still need to be stored according to the above storage conditions. In addition, return the unused wells to the foil pouch containing the desiccant pack and reseal along entire edge of zip-seal.

Test Principle: The microtiter plate provided in this kit has been pre-coated with an antibody specific to REN. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to REN. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain REN, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of REN in the samples is then determined by comparing the O.D. of the samples to the standard curve.
