

Human Nuclear Factor I/X (NFIX) RTU ELISA Kit | NFIX rtu elisa kit

Human Nuclear Factor I/X (NFIX) ELISA Kit

CATALOG #
AAA219437

REACTIVITY
Human

PRODUCT SYNONYMS

Nuclear Factor I/X (NFIX); Human Nuclear Factor I/X (NFIX) ELISA Kit; NF1A; CTF; CCAAT-Binding Transcription Factor; TGGCA-binding protein; NFIX rtu elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Sequence Length	433
Assay Type	Sandwich
Samples	Tissue Homogenates or Other Biological Fluids.
Detection Range	0.156-10ng/mL
Sensitivity	0.064ng/mL
RTU ELISA Kit's Advantage	The Ready-To-Use (RTU) Kits require fewer steps in setup and take less time to run. Detection Solutions are pre-diluted and total incubation time is shorter than many other ELISA Kits.
Preparation and Storage	For unopened kits: All the reagents should be kept at 4 degree C upon receipt. For opened kits: Once the kit is opened, the remaining reagents still need to be stored according to the above storage conditions. In addition, return the unused wells to the foil pouch containing the desiccant pack and reseal along entire edge of zip-seal.

Test Principle: The microtiter plate provided in this kit has been pre-coated with an antibody specific to NFIX. Standards or samples are then added to the appropriate microtiter plate wells with a biotin-conjugated antibody preparation specific to NFIX. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain NFIX, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm $\pm$ 10nm. The concentration of NFIX in the samples is then determined by comparing the O.D. of the samples to the standard curve.
