ADDITIONAL INFORMATION

Related Product Information for anti-NFKB p65 antibody	NFkappaB was originally identified as a factor that binds to the immunoglobulin kappa light chain enhancer in B cells. It was subsequently found in non-B cells in an inactive cytoplasmic form consisting of NFkappaB bound to IkappaB. NFkappaB was originally identified as a heterodimeric DNA binding protein complex consisting of p65 (RelA) and p50 (NF kb1) subunits.
Product Categories/Family for anti-NFKB p65 antibody	DNA & RNA
