ADDITIONAL INFORMATION

Related Product Information for anti-FAS antibody	The enzyme encoded by this gene is a multifunctional protein. Its main function is to catalyze the synthesis of palmitate from acetyl-CoA and malonyl-CoA, in the presence of NADPH, into long-chain saturated fatty acids. In some cancer cell lines, this protein has been found to be fused with estrogen receptor-alpha, in which the N-terminus of FAS is fused in-frame with the C-terminus of ER-alpha.
