ADDITIONAL INFORMATION

Related Product Information for anti-Hsp90 antibody	Heat shock proteins (HSPs) are ubiquitously expressed in all organisms. A major function of Hsp90 and other HSPs is to act as molecular chaperones. Hsp90 forms a complex with glucocorticoid receptor (GR), rendering the non ligand bound receptor transcriptionally inactive. Hsp90 binds the GR as a heterocomplex composed of either Hsp56 or cyclophilin 40, forming an aporeceptor complex. Hsp0 also exists as a dimer with other proteins such as p60/sti1 and p23, forming an aporeceptor complex with estrogen and androgen receptors.
