ADDITIONAL INFORMATION

Related Product Information for anti-SFN antibody	SFN is an adapter protein implicated in the regulation of a large spectrum of both general and specialized signaling pathway. SFN binds to a large number of partners, usually by recognition of a phosphoserine or phosphothreonine motif. Binding generally results in the modulation of the activity of the binding partner. When bound to KRT17, SFN regulates protein synthesis and epithelial cell growth by stimulating Akt/mTOR pathway.
