ADDITIONAL INFORMATION

Related Product Information for anti-Bcl6 antibody	Affinity Purified B-Cell lymphoma 6 protein Antibody N-epitope
	Overview: Transcriptional repressor mainly required for germinal center (GC) formation and antibody affinity maturation which has different mechanisms of action specific to the lineage and biological functions. Forms complexes with different corepressors and histone deacetylases to repress the transcriptional expression of different subsets of target genes. Represses its target genes by binding directly to the DNA sequence 5'-TTCCTAGAA-3' (BCL6-binding site) or indirectly by repressing the transcriptional activity of transcription factors.
