ADDITIONAL INFORMATION

Related Product Information for 5'-pApA (sodium salt) biochemical	5'-pApA is a linearized form of cyclic di-AMP, a bacterial second messenger that activates the host innate immune system through stimulator of interferon genes (STING). It is a metabolite of cyclic di-AMP formed via hydrolysis by various phosphodiesterases (PDEs). 5'-pApA is intended for use as a negative control for cyclic di-AMP signaling.
