

## VH 032 amide-alkylC5-amine Biochemical | VH032 biochemical

VH 032 amide-alkylC5-amine

CATALOG #  
**AAA227127**

### PRODUCT SYNONYMS

VH 032 amide-alkylC5-amine; VH032 biochemical

### PRODUCT SPECIFICATIONS

|                         |                                                                              |
|-------------------------|------------------------------------------------------------------------------|
| Purity/Purification     | 98%                                                                          |
| Solubility              | DMSO: Soluble<br><1mg/ml refers to the product slightly soluble or insoluble |
| Preparation and Storage | Powder: -20 degree C for 3 years<br>In solvent: -80 degree C for 2 years     |

### IMAGES

**Structure**

Eptifibatide acetate, CAS 1248559-53-6

**Structure**

Eptifibatide acetate, CAS 1248559-53-6

### ADDITIONAL INFORMATION

|                                                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| <b>Related Product Information for VH032 biochemical</b> | Functionalized von-Hippel-Lindau protein ligand (VHL) for PROTAC research and development; incorporates an E3 ligase ligand plus an alkyl linker with terminal amine ready for conjugation to a target protein ligand. Part of a range of functionalized tool molecules for PROTAC R&D. This product has been recently renamed. The previous name for this product was VH 032 - linker 13 PROTAC is a registered trademark of Arvinas Operations, Inc., and is used under license. |
