

Donecopride (fumarate hydrate) Biochemical

Donecopride (fumarate hydrate)

CATALOG #
AAA227184

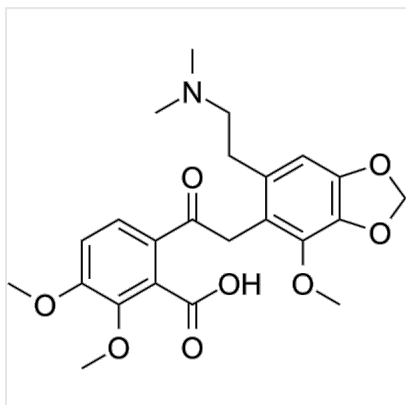

PRODUCT SYNONYMS

Donecopride (fumarate hydrate); Narcein; Donecopride (fumarate hydrate) biochemical

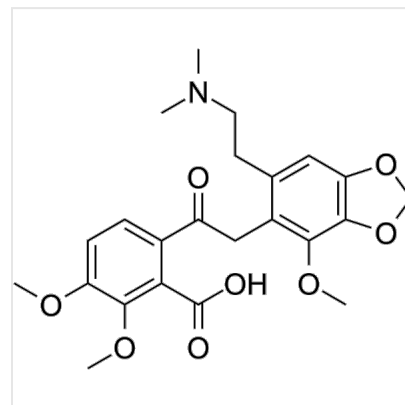

PRODUCT SPECIFICATIONS

Purity/Purification	98%
Solubility	DMSO: 50 mg/mL <1mg/ml refers to the product slightly soluble or insoluble
Preparation and Storage	Powder: -20 degree C for 3 years In solvent: -80 degree C for 2 years

IMAGES

Structure
Narceine, CAS 131-28-2

Structure
Narceine, CAS 131-28-2

ADDITIONAL INFORMATION

Related Product Information for Donecopride (fumarate hydrate) biochemical

Donecopride is a partial agonist of the serotonin (5-HT) receptor subtype 5-HT₄E (K_i= 8.5 nM) and an inhibitor of acetylcholinesterase (AChE; IC₅₀= 16 nM). It is selective for AChE over butyrylcholinesterase (BChE; IC₅₀= 3,530 nM) but does bind to 5-HT₂B and sigma-2 (sigma₂) receptors (K_i= 1.6 nM for both) in a panel of 42 neurotransmitter receptors and transporters. Donecopride induces release of soluble amyloid precursor protein-alpha (sAPP-alpha) in COS-7 cells transiently expressing 5-HT₄ with an EC₅₀ value of 11.3 nM. Oral administration of donecopride (1 mg/kg) reduces brain soluble and insoluble amyloid-beta (1-42) levels and increases the time spent exploring the novel object in the novel object recognition (NOR) test in the 5XFAD transgenic mouse model of Alzheimer's disease. Donecopride (3mg/kg, p.o.) prevents a reduction in spontaneous alternation behavior induced by intracerebroventricular administration of soluble Aβ₄₂ (sAβ₄₂) in the Y-maze in mice.²
