

BMS-986224 biochemical

BMS-986224

CATALOG #
AAA228056

PRODUCT SYNONYMS

BMS-986224; NBL-SS perchlorate; BMS-986224 biochemical

PRODUCT SPECIFICATIONS

Purity/Purification	98%
CAS	2055200-88-7
Targets&IC50	APJ receptor:0.3 nM (Kd)
Solubility	<1mg/ml refers to the product slightly soluble or insoluble
In vitro	BMS-986224 (0.192 mg/kg or 3mg/kg; SC infusion; daily;) in the RHR model increased stroke volume and cardiac output to levels seen in healthy animals but without preventing cardiac hypertrophy and fibrosis, effects differentiated from enalapril[1]. Animal Model: Male Sprague-Dawley rats (renal hypertensive rat model)[1]. Dosage: 0.192 mg/kg or 3mg/kg. Administration: SC infusion; daily; Initiated 3 days before surgery and continued for 7 days after surgery. Result: The achieved steady-state plasma concentrations during 10-day infusion were 102 and 2686 nmol/L at low dose and HD, respectively. At the low dose, BMS-986224 increased SV and CO without affecting other measured parameters, including the measured diastolic parameters, cardiac fibrosis, and heart weight in RHR.
Preparation and Storage	Powder: -20 degree C for 3 years In solvent: -80 degree C for 2 years

ADDITIONAL INFORMATION

Related Product Information for BMS-986224 biochemical

BMS-986224 is a potent, selective and orally bioavailable APJ receptor agonist ($K_d = 0.3 \text{ nM}$). BMS-986224 exhibits similar receptor binding and signaling profile to (Pyr 1) apelin-13. BMS-986224 has the potential for the research of heart failure.
