

General Lipopolysaccharide (LPS) ELISA Kit | LPS elisa kit

General Lipopolysaccharide (LPS) ELISA Kit

CATALOG #
AAA22842

REACTIVITY
General

PRODUCT SYNONYMS

Lipopolysaccharide (LPS); General Lipopolysaccharide (LPS) ELISA Kit; LOS; Lipoglycans; Lipooligosaccharide; Lipo-Oligosaccharide; Endotoxin; LPS elisa kit

PRODUCT SPECIFICATIONS

Reactivity	General
Specificity	This assay has high sensitivity and excellent specificity for detection of lipopolysaccharide. No significant cross-reactivity or interference between lipopolysaccharide and analogues was observed.
Sequence Length	440
Assay Type	Quantitative Competitive
Samples	Serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids
Detection Range	12.35-1,000ng/mL
Sensitivity	< 5.41ng/mL
Intra-assay Precision	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level lipopolysaccharide were tested 20 times on one plate, respectively. Intra-Assay: CV<10%
Inter-assay Precision	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level lipopolysaccharide were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%
Preparation and Storage	The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition. To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end.

ADDITIONAL INFORMATION

Related Product Information for LPS elisa kit	Principle of the Assay: This assay employs the competitive inhibition enzyme immunoassay technique. A monoclonal antibody specific to lipopolysaccharide has been pre-coated onto a microplate. A competitive inhibition reaction is launched between biotin labeled lipopolysaccharide and unlabeled lipopolysaccharide (Standards or samples) with the pre-coated antibody specific to lipopolysaccharide. After incubation the unbound conjugate is washed off. Next, avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. The amount of bound HRP conjugate is reverse proportional to the concentration of lipopolysaccharide in the sample. After addition of the substrate solution, the intensity of color developed is reverse proportional to the concentration of lipopolysaccharide in the sample. Intended Uses: The kit is a competitive inhibition enzyme immunoassay technique for the in vitro quantitative measurement of lipopolysaccharide in serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids.

NCBI AND UNIPROT INFORMATION

NCBI GI #	152264
Molecular Weight	48,590 Da
NCBI Official Full Name	lipopolysaccharide
UniProt Protein Name	Lipopolysaccharide-processing protein LpsZ
UniProt Gene Name	lpsZ
UniProt Synonym Gene Names	rkpZ

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
