

## Mouse Apolipoprotein E (APOE) ELISA Kit | APOE elisa kit

Mouse Apolipoprotein E (APOE) ELISA Kit

CATALOG #  
**AAA22959**

REACTIVITY  
**Mouse**

### PRODUCT SYNONYMS

Apolipoprotein E (APOE); Mouse Apolipoprotein E (APOE) ELISA Kit; Apo-E; AD2; Apoprotein; Alzheimer Disease 2(E4-Associated; Late Onset; APOE elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Mouse                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of APOE. No significant cross-reactivity or interference between APOE and analogues was observed.                                                                                                                                                                                                                                                                                                                  |
| Sequence Length         | 317                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| Samples                 | Mouse serum, plasma, tissue homogenates, cell lysates, cell culture supernates and other biological fluids                                                                                                                                                                                                                                                                                                                                                                                 |
| Detection Range         | 15.6-1,000ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Sensitivity             | < 5.7ng/mL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Intra-assay Precision   | Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level APOE were tested 20 times on one plate, respectively. Intra-Assay: CV<10%                                                                                                                                                                                                                                                                                                                     |
| Inter-assay Precision   | Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level APOE were tested on 3 different plates, 8 replicates in each plate. CV(%) = SD/meanX100. Inter-Assay: CV<12%                                                                                                                                                                                                                                                                                   |
| Preparation and Storage | The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.<br>To minimize extra influence on the performance, operation procedures and lab conditions, especially room temperature, air humidity, incubator temperature should be strictly controlled. It is also strongly suggested that the whole assay is performed by the same operator from the beginning to the end. |

| Related Product Information for APOE elisa kit | Principle of the Assay: The microplate provided in this kit has been pre-coated with an antibody specific to APOE. Standards or samples are then added to the appropriate microplate wells with a biotin-conjugated antibody specific to APOE. Next, Avidin conjugated to Horseradish Peroxidase (HRP) is added to each microplate well and incubated. After TMB substrate solution is added, only those wells that contain APOE, biotin-conjugated antibody and enzyme-conjugated Avidin will exhibit a change in color. The enzyme-substrate reaction is terminated by the addition of sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450nm ± 10nm. The concentration of APOE in the samples is then determined by comparing the O.D. of the samples to the standard curve. |
