Intended Uses: This HIF-1alphaAb ELISA kit is intended for Laboratory Research use only and is not for use in diagnostic or therapeutic procedures. The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. To measure the concentration of HIF-1alphaAb in the sample, this HIF-1alphaAb ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a standard curve of Optical Density versus HIF-1alphaAb concentration. The concentration of HIF-1alphaAb in the samples is then determined by comparing the O.D. of the samples to the standard curve.
