ADDITIONAL INFORMATION

Related Product Information for CLDN12 elisa kit	Principle of the Assay: CLDN12 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-CLDN12 antibody and an CLDN12-HRP conjugate. The assay sample and buffer are incubated together with CLDN12-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CLDN12 concentration since CLDN12 from samples and CLDN12-HRP conjugate compete for the anti-CLDN12 antibody binding site. Since the number of sites is limited, as more sites are occupied by CLDN12 from the sample, fewer sites are left to bind CLDN12-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CLDN12 concentration in each sample is interpolated from this standard curve. Intended Uses: This CLDN12 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat CLDN12.
