

Sheep Alpha-2-HS-glycoprotein (AHSG) ELISA Kit | AHSG elisa kit

Sheep Alpha-2-HS-glycoprotein (AHSG) ELISA Kit

CATALOG #
AAA244367

REACTIVITY
Sheep

PRODUCT SYNONYMS

Alpha-2-HS-glycoprotein (AHSG); Sheep Alpha-2-HS-glycoprotein (AHSG) ELISA Kit; AHSG elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Sheep
Specificity	This assay has high sensitivity and excellent specificity for detection of AHSG. No significant cross-reactivity or interference between AHSG and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between AHSG and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for AHSG elisa kit	Intended Uses: This AHSG ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Sheep AHSG. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: AHSG ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-AHSG antibody and an AHSG-HRP conjugate. The assay sample and buffer are incubated together with AHSG-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the AHSG concentration since AHSG from samples and AHSG-HRP conjugate compete for the anti-AHSG antibody binding site. Since the number of sites is limited, as more sites are occupied by AHSG from the sample, fewer sites are left to bind AHSG-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The AHSG concentration in each sample is interpolated from this standard curve.

NCBI AND UNIPROT INFORMATION

NCBI GI #	178284
Molecular Weight	39,325 Da
NCBI Official Full Name	alpha-2-HS-glycoprotein
UniProt Protein Name	Alpha-2-HS-glycoprotein
UniProt Gene Name	AHSG
UniProt Synonym Gene Names	FETUA; PRO2743
UniProt Entry Name	FETUA_HUMAN

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
