

Human anti gastric parietal cell antibody, AGPA/PCA ELISA Kit

Human anti gastric parietal cell antibody, AGPA/PCA ELISA Kit

CATALOG #
AAA244916

REACTIVITY
Human

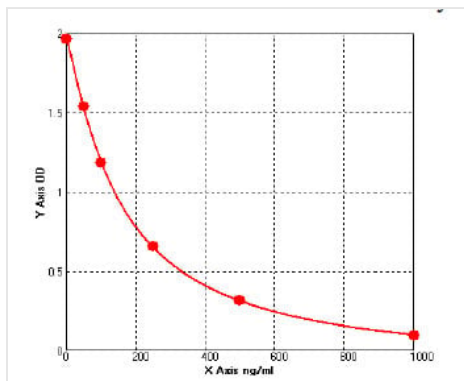

PRODUCT SYNONYMS

anti gastric parietal cell antibody; AGPA/PCA; Human anti gastric parietal cell antibody; AGPA/PCA ELISA Kit; AGPA/PCA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of AGPA/PCA. No significant cross-reactivity or interference between AGPA/PCA and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between AGPA/PCA and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for anti gastric parietal cell antibody, AGPA/PCA elisa kit	Principle of the Assay: AGPA/PCA ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-AGPA/PCA antibody and an AGPA/PCA-HRP conjugate. The assay sample and buffer are incubated together with AGPA/PCA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the AGPA/PCA concentration since AGPA/PCA from samples and AGPA/PCA-HRP conjugate compete for the anti-AGPA/PCA antibody binding site. Since the number of sites is limited, as more sites are occupied by AGPA/PCA from the sample, fewer sites are left to bind AGPA/PCA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The AGPA/PCA concentration in each sample is interpolated from this standard curve. Intended Uses: This AGPA/PCA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human AGPA/PCA. This ELISA kit for research use only, not for therapeutic or test applications!
--	--

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
