

Canine Cross Linked C-Telopeptide Of Type II Collagen ELISA Kit | CTx2 elisa kit

Canine Cross Linked C-Telopeptide Of Type II Collagen ELISA Kit

CATALOG #
AAA244958

REACTIVITY
Canine

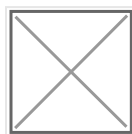

PRODUCT SYNONYMS

Cross Linked C-Telopeptide Of Type II Collagen; Canine Cross Linked C-Telopeptide Of Type II Collagen ELISA Kit; CTx2 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Competitive (Quantitative)
Sensitivity	0.1 ng/mL.
Preparation and Storage	Store all reagents at 2-8 degree C.

Intended Uses: This CTXII ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine CTXII. This ELISA kit for research use only!

Principle of the Assay: CTXII ELISA kit applies the competitive enzyme immunoassay technique utilizing a Polyclonal anti-CTXII antibody and an CTXII-HRP conjugate. The assay sample and buffer are incubated together with CTXII-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CTXII concentration since CTXII from samples and CTXII-HRP conjugate compete for the anti-CTXII antibody binding site. Since the number of sites is limited, as more sites are occupied by CTXII from the sample, fewer sites are left to bind CTXII-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CTXII concentration in each sample is interpolated from this standard curve.
