

Canine 11-Deoxycortisol ELISA Kit

Canine 11-Deoxycortisol ELISA Kit

CATALOG #
AAA245062

REACTIVITY
Canine

PRODUCT SYNONYMS

11-Deoxycortisol; Canine 11-Deoxycortisol ELISA Kit; 11-Deoxycortisol elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Specificity	This assay has high sensitivity and excellent specificity for detection of 11D-CORT. No significant cross-reactivity or interference between 11D-CORT and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between 11D-CORT and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 nmol/L
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for 11-Deoxycortisol elisa kit	Intended Uses: This 11D-CORT ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine 11D-CORT. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: 11D-CORT ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-11D-CORT antibody and an 11D-CORT-HRP conjugate. The assay sample and buffer are incubated together with 11D-CORT-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the 11D-CORT concentration since 11D-CORT from samples and 11D-CORT-HRP conjugate compete for the anti-11D-CORT antibody binding site. Since the number of sites is limited, as more sites are occupied by 11D-CORT from the sample, fewer sites are left to bind 11D-CORT-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The 11D-CORT concentration in each sample is interpolated from this standard curve.
---	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
