

Rabbit anti-cardiolipin antibody IgM, ACA-IgM ELISA Kit

Rabbit anti-cardiolipin antibody IgM, ACA-IgM ELISA Kit

CATALOG #
AAA245089

REACTIVITY
Rabbit

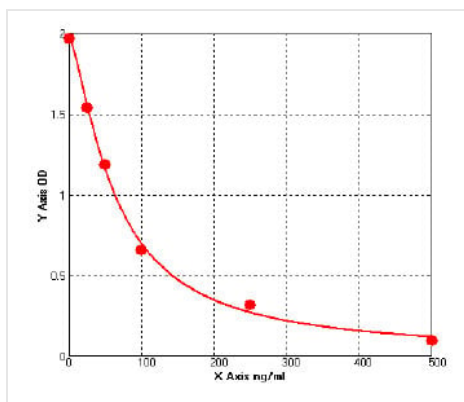

PRODUCT SYNONYMS

anti-cardiolipin antibody IgM; ACA-IgM; Rabbit anti-cardiolipin antibody IgM; ACA-IgM ELISA Kit; ACA-IgM elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rabbit
Specificity	This assay has high sensitivity and excellent specificity for detection of ACA-IgM. No significant cross-reactivity or interference between ACA-IgM and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between ACA-IgM and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for anti-cardiolipin antibody IgM, ACA-IgM elisa kit	Principle of the Assay: ACA-IgM ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-ACA-IgM antibody and an ACA-IgM-HRP conjugate. The assay sample and buffer are incubated together with ACA-IgM-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ACA-IgM concentration since ACA-IgM from samples and ACA-IgM-HRP conjugate compete for the anti-ACA-IgM antibody binding site. Since the number of sites is limited, as more sites are occupied by ACA-IgM from the sample, fewer sites are left to bind ACA-IgM-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ACA-IgM concentration in each sample is interpolated from this standard curve. Intended Uses: This ACA-IgM ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rabbit ACA-IgM. This ELISA kit for research use only, not for therapeutic or test applications!
---	--

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
