

Mouse anti-IgA antibody ELISA Kit

Mouse anti-IgA antibody ELISA Kit

CATALOG #
AAA245287

REACTIVITY
Mouse

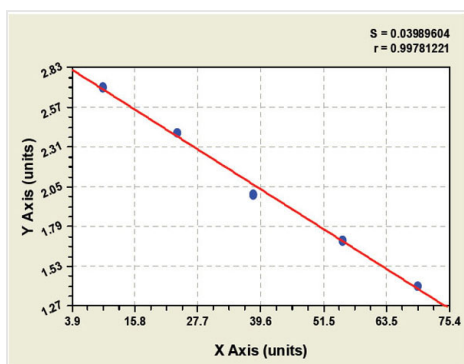

PRODUCT SYNONYMS

anti-IgA antibody; Mouse anti-IgA antibody ELISA Kit; anti-IgA antibody elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Samples	Serum, plasma, Cell Culture Supernatants, body fluid and tissue homogenate
Assay Type	Competitive
Sensitivity	1.0 ng/mL.
Intended Uses	This IgA antibody ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse IgA antibody. This ELISA kit for research use only, not for therapeutic applications!
Preparation and Storage	Store all reagents at 2-8 degree C.

Related Product Information for anti-IgA antibody elisa kit

Principle of the assay: IgA antibody ELISA kit applies the competitive enzyme immunoassay technique utilizing a monoclonal anti-IgA antibody antibody and an IgA antibody-HRP conjugate. The assay sample and buffer are incubated together with IgA antibody-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the IgA antibody concentration since IgA antibody from samples and IgA antibody-HRP conjugate compete for the anti-IgA antibody antibody binding site. Since the number of sites is limited, as more sites are occupied by IgA antibody from the sample, fewer sites are left to bind IgA antibody-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The IgA antibody concentration in each sample is interpolated from this standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
