

Canine Collagen alpha-1 (XIII) chain (COL13A1) ELISA Kit | COL13A1 elisa kit

Canine Collagen alpha-1 (XIII) chain (COL13A1) ELISA Kit

CATALOG #
AAA245762

REACTIVITY
Canine

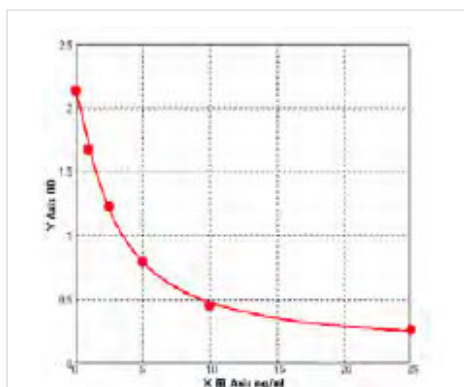

PRODUCT SYNONYMS

Collagen alpha-1 (XIII) chain (COL13A1); Canine Collagen alpha-1 (XIII) chain (COL13A1) ELISA Kit; COL13A1 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Canine
Specificity	This assay has high sensitivity and excellent specificity for detection of COL13A1. No significant cross-reactivity or interference between COL13A1 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between COL13A1 and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for COL13A1 elisa kit	Intended Uses: This COL13A1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Canine COL13A1. This ELISA kit for research use only! Principle of the Assay: COL13A1 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-COL13A1 antibody and an COL13A1-HRP conjugate. The assay sample and buffer are incubated together with COL13A1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the COL13A1 concentration since COL13A1 from samples and COL13A1-HRP conjugate compete for the anti-COL13A1 antibody binding site. Since the number of sites is limited, as more sites are occupied by COL13A1 from the sample, fewer sites are left to bind COL13A1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The COL13A1 concentration in each sample is interpolated from this standard curve.
Product Categories/Family for COL13A1 elisa kit	Signal Transduction

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
