

Guinea Pig anti-cyclic citrullinated peptide antibody (anti-CCP antibody) ELISA Kit

Guinea pig anti-cyclic citrullinated peptide antibody (anti-CCP antibody) ELISA Kit

CATALOG #
AAA245969

REACTIVITY
Guinea Pig

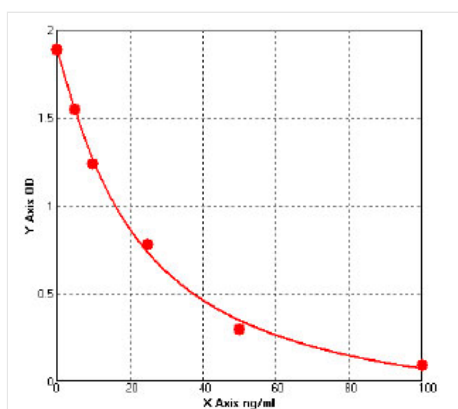

PRODUCT SYNONYMS

anti-cyclic citrullinated peptide antibody (anti-CCP antibody); Guinea pig anti-cyclic citrullinated peptide antibody (anti-CCP antibody) ELISA Kit; anti-cyclic citrullinated peptide antibody (anti-CCP antibody) elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Guinea Pig
Specificity	This assay has high sensitivity and excellent specificity for detection of CCP-Ab. No significant cross-reactivity or interference between CCP-Ab and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between CCP-Ab and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for anti-cyclic citrullinated peptide antibody (anti-CCP antibody) elisa kit	Intended Uses: This CCP-Ab ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Guinea pig CCP-Ab. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: CCP-Ab ELISA kit applies the competitive enzyme immunoassay technique utilizing Cyclic Citrullinated Peptide antigen and an CCP- Ab-HRP conjugate. The assay sample and buffer are incubated together with CCP-Ab-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the react ion, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CCP-Ab concentration since CCP-Ab from samples and CCP- Ab-HRP conjugate compete for the Cyclic Citrullinated Peptide antigen binding site. Since the number of sites is limited, as more sites are occupied by CCP-Ab from the sample, fewer sites are left to bind CCP- Ab-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CCP-Ab concentration in each sample is interpolated from this standard curve.
---	--

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
