ADDITIONAL INFORMATION

Related Product Information for ADRA1B elisa kit	Intended Uses: This ADRA1B ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse ADRA1B. This ELISA kit for research use only! Principle of the Assay ADRA1B ELISA kit applies the competitive enzyme immunoassay technique utilizing a Polyclonal anti-ADRA1B antibody and an ADRA1B-HRP conjugate. The assay sample and buffer are incubated together with ADRA1B-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the ADRA1B concentration since ADRA1B from samples and ADRA1B-HRP conjugate compete for the anti-ADRA1B antibody binding site. Since the number of sites is limited, as more sites are occupied by ADRA1B from the sample, fewer sites are left to bind ADRA1B-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The ADRA1B concentration in each sample is interpolated from this standard curve.
