Intended Uses: This HSV-1 IgG ELISA kit is intended Laboratory for Research use only. The Stop Solution changes the color from blue to yellow and the intensity of the color is measured at 450 nm using a spectrophotometer. In order to measure the concentration of HSV-1 IgG in the sample, this HSV-1 IgG ELISA Kit includes a set of calibration standards. The calibration standards are assayed at the same time as the samples and allow the operator to produce a cutoff value. The existence or not of HSV-1 IgG in the samples is then determined by comparing the O.D. of the samples to the CUT OFF.
