

Rat Phosphatidylinositol diphosphate ELISA Kit

Rat Phosphatidylinositol diphosphate ELISA Kit

CATALOG #
AAA246595

REACTIVITY
Rat

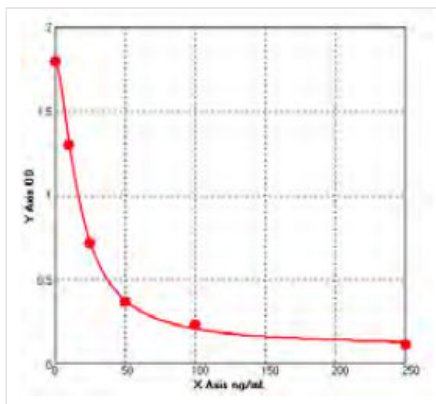

PRODUCT SYNONYMS

Phosphatidylinositol diphosphate; Rat Phosphatidylinositol diphosphate ELISA Kit; Phosphatidylinositol diphosphate elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Rat
Specificity	This assay has high sensitivity and excellent specificity for detection of PLDH. No significant cross-reactivity or interference between PLDH and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between PLDH and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for Phosphatidylinositol diphosphate elisa kit	Intended Uses: This PLDH ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat PLDH. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: PLDH ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-PLDH antibody and an PLDH-HRP conjugate. The assay sample and buffer are incubated together with PLDH-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PLDH concentration since PLDH from samples and PLDH-HRP conjugate compete for the anti-PLDH antibody binding site. Since the number of sites is limited, as more sites are occupied by PLDH from the sample, fewer sites are left to bind PLDH-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PLDH concentration in each sample is interpolated from this standard curve.
Product Categories/Family for Phosphatidylinositol diphosphate elisa kit	Signal Transduction

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
