

Porcine major acute phase protein (MAP) ELISA Kit | ITIH4 elisa kit

Porcine major acute phase protein (MAP) ELISA Kit

CATALOG #
AAA246750

REACTIVITY
Porcine

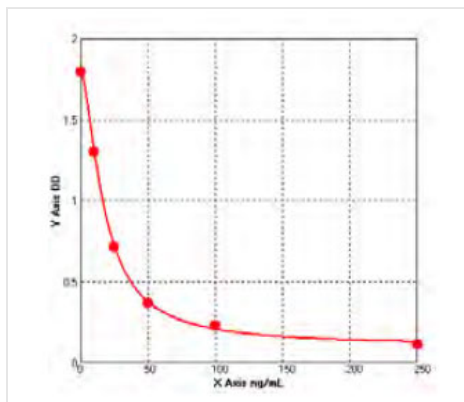

PRODUCT SYNONYMS

major acute phase protein (MAP); Porcine major acute phase protein (MAP) ELISA Kit; ITIH4 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Porcine
Specificity	This assay has high sensitivity and excellent specificity for detection of MAP. No significant cross-reactivity or interference between MAP and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between MAP and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 ng/mL
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for ITIH4 elisa kit	Principle of the Assay: MAP ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-MAP antibody and an MAP-HRP conjugate. The assay sample and buffer are incubated together with MAP-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the MAP concentration since MAP from samples and MAP-HRP conjugate compete for the anti-MAP antibody binding site. Since the number of sites is limited, as more sites are occupied by MAP from the sample, fewer sites are left to bind MAP-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The MAP concentration in each sample is interpolated from this standard curve. Intended Uses: This MAP ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Porcine MAP. This ELISA kit for research use only, not for therapeutic or test applications!
Product Categories/Family for ITIH4 elisa kit	Immunology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
