

Human Notch Homolog 3 ELISA Kit | NOTCH-3 elisa kit

Human Notch Homolog 3 ELISA Kit

CATALOG #
AAA247200

REACTIVITY
Human

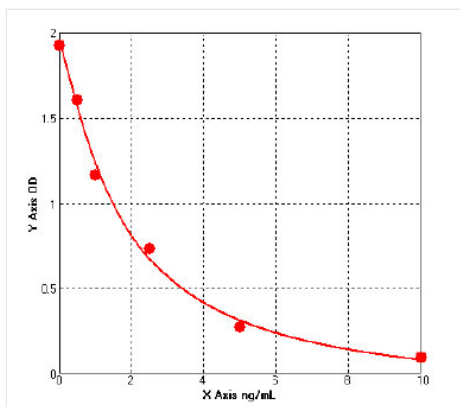

PRODUCT SYNONYMS

Notch Homolog 3; Human Notch Homolog 3 ELISA Kit; NOTCH-3 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of NOTCH3. No significant cross-reactivity or interference between NOTCH3 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between NOTCH3 and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL

ADDITIONAL INFORMATION

Related Product Information for NOTCH-3 elisa kit	Intended Uses: This NOTCH3 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human NOTCH3. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: NOTCH3 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-NOTCH3 antibody and an NOTCH3-HRP conjugate. The assay sample and buffer are incubated together with NOTCH3-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the NOTCH3 concentration since NOTCH3 from samples and NOTCH3-HRP conjugate compete for the anti-NOTCH3 antibody binding site. Since the number of sites is limited, as more sites are occupied by NOTCH3 from the sample, fewer sites are left to bind NOTCH3-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The NOTCH3 concentration in each sample is interpolated from this standard curve.
