

## Rat Uridine Phosphorylase 1 (UPP1) ELISA Kit | UPP1 elisa kit

Rat Uridine Phosphorylase 1 (UPP1) ELISA Kit

CATALOG #  
AAA247320

REACTIVITY  
Rat

### PRODUCT SYNONYMS

Uridine Phosphorylase 1 (UPP1); Rat Uridine Phosphorylase 1 (UPP1) ELISA Kit; UPP1 elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Rat                                                                                                                                                                                                                                                                                                                                                                                      |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of UPP1. No significant cross-reactivity or interference between UPP1 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between UPP1 and all the analogues, therefore, cross reaction may still exist in some cases. |
| Sequence Length         | 311                                                                                                                                                                                                                                                                                                                                                                                      |
| Assay Type              | Quantitative Competitive                                                                                                                                                                                                                                                                                                                                                                 |
| Samples                 | Serum, plasma, cell culture supernatants, body fluid and tissue homogenate                                                                                                                                                                                                                                                                                                               |
| Sensitivity             | 0.1 ng/mL                                                                                                                                                                                                                                                                                                                                                                                |
| Reactivity Note         | No significant cross-reactivity or interference between this antigen and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection, therefore, cross reaction may still exist in some cases.                                                                                                             |
| Preparation and Storage | Store at 2-8 degree C.<br>The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.                                                                                                                                                                                     |

| Related Product Information for UPP1 elisa kit | <p>Principle of the Assay: UPP1 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-UPP1 antibody and an UPP1-HRP conjugate. The assay sample and buffer are incubated together with UPP1-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the UPP1 concentration since UPP1 from samples and UPP1-HRP conjugate compete for the anti-UPP1 antibody binding site. Since the number of sites is limited, as more sites are occupied by UPP1 from the sample, fewer sites are left to bind UPP1-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The UPP1 concentration in each sample is interpolated from this standard curve.</p> <p>Intended Uses: This UPP1 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Rat UPP1. This ELISA kit for research use only, not for therapeutic or test applications!</p> |
