

Mouse Anti Gliadin Antibody (IgA) ELISA Kit | IgA elisa kit

Mouse Anti Gliadin Antibody (IgA) ELISA Kit

CATALOG #
AAA247330

REACTIVITY
Mouse

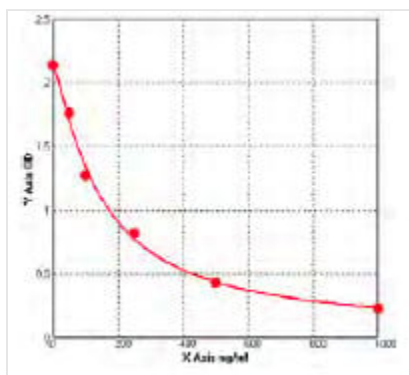

PRODUCT SYNONYMS

Anti Gliadin Antibody (IgA); Mouse Anti Gliadin Antibody (IgA) ELISA Kit; IgA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of AGAb-IgA. No significant cross-reactivity or interference between AGAb-IgA and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between AGAb-IgA and all the analogues, therefore, cross reaction may still exist in some cases.
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	1.0 ng/mL
Preparation and Storage	Store at 2-8 degree C. The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.

ADDITIONAL INFORMATION

Related Product Information for IgA elisa kit	Intended Uses: This AGAb-IgA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse AGAb-IgA. This ELISA kit for research use only, not for therapeutic or test applications! Principle of the Assay: AGAb-IgA ELISA kit applies the competitive enzyme immunoassay technique utilizing a polyclonal anti-AGAb-IgA antibody and an AGAb-IgA-HRP conjugate. The assay sample and buffer are incubated together with AGAb-IgA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the AGAb-IgA concentration since AGAb-IgA from samples and AGAb-IgA-HRP conjugate compete for the anti-AGAb-IgA antibody binding site. Since the number of sites is limited, as more sites are occupied by AGAb-IgA from the sample, fewer sites are left to bind AGAb-IgA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The AGAb-IgA concentration in each sample is interpolated from this standard curve.
Product Categories/Family for IgA elisa kit	Cell Biology

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
