PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of PSMB4. No significant cross-reactivity or interference between PSMB4 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between PSMB4 and all the analogues, therefore, cross reaction may still exist in some cases.
Sequence Length	264
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 pg/mL
Reactivity Note	No significant cross-reactivity or interference between this antigen and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection, therefore, cross reaction may still exist in some cases.
Preparation and Storage	Store at 2-8 degree C. The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.

ADDITIONAL INFORMATION

Related Product Information for PSMB4 elisa kit	Principle of the Assay: PSMB4 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-PSMB4 antibody and an PSMB4-HRP conjugate. The assay sample and buffer are incubated together with PSMB4-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the PSMB4 concentration since PSMB4 from samples and PSMB4-HRP conjugate compete for the anti-PSMB4 antibody binding site. Since the number of sites is limited, as more sites are occupied by PSMB4 from the sample, fewer sites are left to bind PSMB4-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The PSMB4 concentration in each sample is interpolated from this standard curve. Intended Uses: This PSMB4 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse PSMB4. This ELISA kit for research use only, not for therapeutic or test applications!
