

Porcine CC Chemokine Receptor 6 ELISA Kit | CCR6 elisa kit

Porcine CC Chemokine Receptor 6 ELISA Kit

CATALOG #
AAA247411

REACTIVITY
Porcine

PRODUCT SYNONYMS

CC Chemokine Receptor 6; Porcine CC Chemokine Receptor 6 ELISA Kit; CCR6 elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Porcine
Specificity	This assay has high sensitivity and excellent specificity for detection of CCR6. No significant cross-reactivity or interference between CCR6 and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between CCR6 and all the analogues, therefore, cross reaction may still exist in some cases.
Sequence Length	374
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Assay Type	Quantitative Competitive
Sensitivity	0.1 ng/mL
Reactivity Note	No significant cross-reactivity or interference between this antigen and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection, therefore, cross reaction may still exist in some cases.
Preparation and Storage	Store at 2-8 degree C. The stability of kit is determined by the loss rate of activity. The loss rate of this kit is less than 5% within the expiration date under appropriate storage condition.

ADDITIONAL INFORMATION

Related Product Information for CCR6 elisa kit	Intended Uses: This CCR6 ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Porcine CCR6. This ELISA kit for research use only! Principle of the Assay: CCR6 ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-CCR6 antibody and an CCR6-HRP conjugate. The assay sample and buffer are incubated together with CCR6-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the CCR6 concentration since CCR6 from samples and CCR6-HRP conjugate compete for the anti-CCR6 antibody binding site. Since the number of sites is limited, as more sites are occupied by CCR6 from the sample, fewer sites are left to bind CCR6-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The CCR6 concentration in each sample is interpolated from this standard curve.
