

Human Gasdermin-A ELISA Kit | GSDMA elisa kit

Human Gasdermin-A ELISA Kit

CATALOG #
AAA247618

REACTIVITY
Human

PRODUCT SYNONYMS

Gasdermin-A; Human Gasdermin-A ELISA Kit; GSDMA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Specificity	This assay has high sensitivity and excellent specificity for detection of GSDMA. No significant cross-reactivity or interference between GSDMA and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between GSDMA and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	0.1 ng/mL
Intra-Assay	CV<10%
Inter-Assay	CV<15%
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for GSDMA elisa kit	Principle of the Assay: GSDMA ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-GSDMA antibody and an GSDMA-HRP conjugate. The assay sample and buffer are incubated together with GSDMA-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the GSDMA concentration since GSDMA from samples and GSDMA-HRP conjugate compete for the anti-GSDMA antibody binding site. Since the number of sites is limited, as more sites are occupied by GSDMA from the sample, fewer sites are left to bind GSDMA-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The GSDMA concentration in each sample is interpolated from this standard curve. Intended Uses: This GSDMA ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human GSDMA. This ELISA kit for research use only, not for therapeutic or test applications!
--	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
