

## Human LOW Molecular Weight Adiponectin ELISA Kit | LOW-ADP elisa kit

Human LOW Molecular Weight Adiponectin ELISA Kit

CATALOG #  
**AAA247627**

REACTIVITY  
**Human**

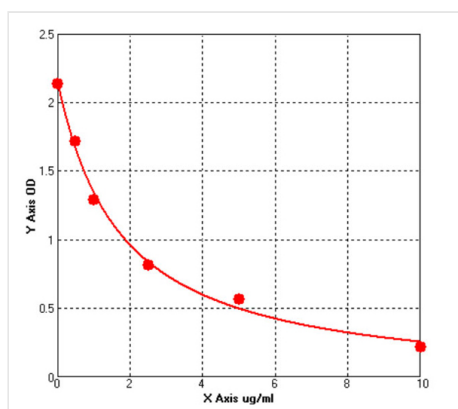

### PRODUCT SYNONYMS

LOW Molecular Weight Adiponectin; Human LOW Molecular Weight Adiponectin ELISA Kit; LOW-ADP elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                                                                                                                                                                                                                |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of LMW-ADPN. No significant cross-reactivity or interference between LMW-ADPN and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between LMW-ADPN and all the analogues, therefore, cross reaction may still exist in some cases. |
| Assay Type              | Quantitative Competitive                                                                                                                                                                                                                                                                                                                                                                             |
| Samples                 | Serum, plasma, cell culture supernatants, body fluid and tissue homogenate                                                                                                                                                                                                                                                                                                                           |
| Sensitivity             | 0.1 ug/mL                                                                                                                                                                                                                                                                                                                                                                                            |
| Intra-Assay             | CV<10%                                                                                                                                                                                                                                                                                                                                                                                               |
| Inter-Assay             | CV<15%                                                                                                                                                                                                                                                                                                                                                                                               |
| Preparation and Storage | Store all reagents at 2-8 degree C.                                                                                                                                                                                                                                                                                                                                                                  |

|---------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Related Product Information for LOW-ADP elisa kit | <p>Principle of the Assay: LMW-ADPN ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-LMW-ADPN antibody and an LMW-ADPN-HRP conjugate. The assay sample and buffer are incubated together with LMW-ADPN-HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the LMW-ADPN concentration since LMW-ADPN from samples and LMW-ADPN-HRP conjugate compete for the anti-LMW-ADPN antibody binding site. Since the number of sites is limited, as more sites are occupied by LMW-ADPN from the sample, fewer sites are left to bind LMW-ADPN-HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The LMW-ADPN concentration in each sample is interpolated from this standard curve.</p> <p>Intended Uses: This LMW-ADPN ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Human LMW-ADPN. This ELISA kit for research use only, not for therapeutic or test applications!</p> |

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
