

Mouse Normetanephrine ELISA Kit | NM elisa kit

Mouse Normetanephrine ELISA Kit

CATALOG #
AAA247903

REACTIVITY
Mouse

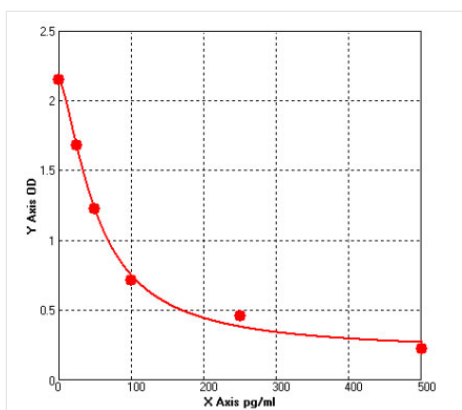

PRODUCT SYNONYMS

Normetanephrine; Mouse Normetanephrine ELISA Kit; NM elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Mouse
Specificity	This assay has high sensitivity and excellent specificity for detection of NMN. No significant cross-reactivity or interference between NMN and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection between NMN and all the analogues, therefore, cross reaction may still exist in some cases.
Assay Type	Quantitative Competitive
Samples	Serum, plasma, cell culture supernatants, body fluid and tissue homogenate
Sensitivity	1.0 pg/mL
Cross Reaction	No significant cross-reactivity or interference between this antigen and analogues was observed. NOTE: Limited by current skills and knowledge, it is impossible for us to complete the cross-reactivity detection, therefore, cross reaction may still exist in some cases.
Reproducibility	Intra-Assay: CV<10% Inter-Assay: CV<55%
Preparation and Storage	Store all reagents at 2-8 degree C.

ADDITIONAL INFORMATION

Related Product Information for NM elisa kit	Principle of the Assay: NMN ELISA kit applies the competitive enzyme immunoassay technique utilizing an anti-NMN antibody and an NMN -HRP conjugate. The assay sample and buffer are incubated together with NMN -HRP conjugate in pre-coated plate for one hour. After the incubation period, the wells are decanted and washed five times. The wells are then incubated with a substrate for HRP enzyme. The product of the enzyme-substrate reaction forms a blue colored complex. Finally, a stop solution is added to stop the reaction, which will then turn the solution yellow. The intensity of color is measured spectrophotometrically at 450nm in a microplate reader. The intensity of the color is inversely proportional to the NMN concentration since NMN from samples and NMN -HRP conjugate compete for the anti-NMN antibody binding site. Since the number of sites is limited, as more sites are occupied by NMN from the sample, fewer sites are left to bind NMN -HRP conjugate. A standard curve is plotted relating the intensity of the color (O.D.) to the concentration of standards. The NMN concentration in each sample is interpolated from this standard curve. Intended Uses: This NMN ELISA kit is a 1.5 hour solid-phase ELISA designed for the quantitative determination of Mouse NMN. This ELISA kit for research use only, not for therapeutic or test applications!
--	---

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
