

## Human KDM1A (Lysine-specific histone demethylase 1A) ELISA Kit | KDM1A elisa kit

Human KDM1A (Lysine-specific histone demethylase 1A) ELISA Kit

CATALOG #  
**AAA248187**

REACTIVITY  
**Human**

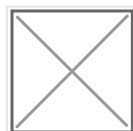

### PRODUCT SYNONYMS

KDM1A (Lysine-specific histone demethylase 1A); Human KDM1A (Lysine-specific histone demethylase 1A) ELISA Kit; KDM1A elisa kit

### PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                             |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                       |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of KDM1A. No significant cross-reactivity or interference between KDM1A and analogues was observed. |
| Sequence Length         | 853                                                                                                                                                                         |
| Assay Type              | Sandwich                                                                                                                                                                    |
| Samples                 | Serum, plasma, tissue homogenates and other biological fluids                                                                                                               |
| Detection Range         | 15.625-1000pg/ml                                                                                                                                                            |
| Sensitivity             | 9.375pg/ml                                                                                                                                                                  |
| Intra-assay Precision   | CV<8%                                                                                                                                                                       |
| Inter-assay Precision   | CV<10%                                                                                                                                                                      |
| Preparation and Storage | Store entire kit at 2-8C for short-term. For longer-term, please store the microplate & standard at -20C, while the remaining reagents can be stored at 2-8C                |

### ADDITIONAL INFORMATION

#### Related Product Information for KDM1A elisa kit

Principle of the Assay: This kit was based on sandwich enzyme-linked immune-sorbent assay technology. Capture antibody was pre-coated onto 96-well plates. And the biotin conjugated antibody was used as detection antibodies. The standards, test samples and biotin conjugated detection antibody were added to the wells subsequently, and washed with wash buffer. HRP-Streptavidin was added and unbound conjugates were washed away with wash buffer. TMB substrates were used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a blue color product that changed into yellow after adding acidic stop solution. The density of yellow is proportional to the target amount of sample captured in plate. Read the O.D. absorbance at 450nm in a microplate reader, and then the concentration of target can be calculated.
