

Human NMDA IgG (N-methyl-D-aspartic Acid IgG) ELISA Kit | NMDA elisa kit

Human NMDA Antibody IgG (N-methyl-D-aspartic Acid Antibody IgG) ELISA Kit

CATALOG #
AAA248396

REACTIVITY
Human

PRODUCT SYNONYMS

NMDA IgG (N-methyl-D-aspartic Acid IgG); Human NMDA Antibody IgG (N-methyl-D-aspartic Acid Antibody IgG) ELISA Kit; NMDA elisa kit

PRODUCT SPECIFICATIONS

Reactivity	Human
Assay Type	Sandwich ELISA, Double Antigen
Samples	Serum, Plasma, Cell Culture Supernatant, cell or tissue lysate, Other liquid samples
Detection Range	1.563-100ng/ml
Sensitivity	0.938ng/ml
Preparation and Storage	Store entire kit at 2-8C for short-term. For longer-term, please store the microplate & standard at -20C, while the remaining reagents can be stored at 2-8C

ADDITIONAL INFORMATION

Related Product Information for NMDA elisa kit

Principle of the Assay: This ELISA kit uses Competitive-ELISA as the method. The microtiter plate provided in this kit has been pre-coated with NMDA Antibody IgG . During the reaction, NMDA Antibody IgG in the sample or standard competes with a fixed amount of NMDA Antibody IgG on the solid phase supporter for sites on the Biotinylated Detection Antibody specific to NMDA Antibody IgG . Excess conjugate and unbound sample or standard are washed from the plate, and HRP-Streptavidin(SABC) is added to each microplate well and incubated. Then a TMB substrate solution is added to each well. The enzyme-substrate reaction is terminated by the addition of a sulphuric acid solution and the color change is measured spectrophotometrically at a wavelength of 450 nm. The concentration of NMDA Antibody IgG in the samples is then determined by comparing the O.D. of the samples to the standard curve.

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
