Application Data
Proximity Ligation Analysis of protein-protein interactions between CRKL and PIK3R1. Mafhavu cells were stained with anti-CRKL rabbit purified polyclonal 1:1200 and anti-PIK3R1 mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

Application Data
Proximity Ligation Analysis of protein-protein interactions between FLT1 and PIK3R1 Huh7 cells were stained with anti-FLT1 rabbit purified polyclonal 1:1200 and anti-PIK3R1 mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

Application Data
Proximity Ligation Analysis of protein-protein interactions between EGFR and PIK3R1. HeLa cells were stained with EGFR rabbit purified polyclonal 1:1200 and PIK3R1 mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

ADDITIONAL INFORMATION

Related Product Information for anti-PIK3R1 antibody

PI3KR1 binds to activated (phosphorylated) protein-Tyr kinases, through its SH2 domain, and acts as an adapter, mediating the association of the P110 catalytic unit to the plasma membrane. It is necessary for the insulin-stimulated increase in glucose uptake and glycogen synthesis in insulin-sensitive tissues. It is a component of a heterodimer composed of P110 (catalytic) and P85 (regulatory) subunits. PI3KR1 is proposed to interact with phosphorylated TOM1L1. Defects in PIK3R1 are a cause of severe insulin resistance. The protein contains 1 Rho-GAP domain, 2 SH2 domains, and 1 SH3 domain.
