

# Human COVID 19 Nucleocapsid (NP) IgM Coronavirus ELISA Kit | SARS-CoV2 elisa kit

Human anti-SARS-CoV2 (N) IgM ELISA Kit

CATALOG #  
**AAA249354**

REACTIVITY  
**Human**

## PRODUCT SYNONYMS

COVID 19 Nucleocapsid (NP) IgM Coronavirus; Human anti-SARS-CoV2 (N) IgM ELISA Kit; 2019 Novel Coronavirus; Coronavirus; CoV; COVID-19 virus; HCoV-2; Human Coronavirus 2019; SARS2; SARS-CoV-2; Severe acute respiratory syndrome coronavirus 2; Nucleocapsid; Nucleoprotein (NP) IgM; SARS-CoV2 elisa kit

## PRODUCT SPECIFICATIONS

|                         |                                                                                                                                                                                                             |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Reactivity              | Human                                                                                                                                                                                                       |
| Specificity             | This assay has high sensitivity and excellent specificity for detection of Anti-SARS-CoV2(N) IgM. No significant cross-reactivity or interference between Anti-SARS-CoV2(N) IgM and analogues was observed. |
| Assay Type              | Indirect ELISA                                                                                                                                                                                              |
| Samples                 | Serum, Plasma, Cell Culture Supernatant, cell or tissue lysate, Other liquid samples                                                                                                                        |
| Detection Range         | 0.781-50ng/ml                                                                                                                                                                                               |
| Sensitivity             | 0.469ng/ml                                                                                                                                                                                                  |
| Intra-assay Precision   | CV<8%                                                                                                                                                                                                       |
| Inter-assay Precision   | CV<10%                                                                                                                                                                                                      |
| Preparation and Storage | Store entire kit at 2-8C for short-term. For longer-term, please store the microplate & standard at -20C, while the remaining reagents can be stored at 2-8C                                                |

## ADDITIONAL INFORMATION

### Related Product Information for SARS-CoV2 elisa kit

**Principle of the Assay:** This kit was based on indirect enzyme-linked immune-sorbent assay technology. Recombinant nucleocapsid protein was pre-coated onto 96-well plates. And the HRP conjugated antibody was used as detection antibodies. The standards, test samples and HRP conjugated detection antibody were added to the wells subsequently, and washed with wash buffer. TMB substrates were used to visualize HRP enzymatic reaction. TMB was catalyzed by HRP to produce a blue color product that changed into yellow after adding acidic stop solution. The density of yellow is proportional to the target amount of sample captured in plate. Read the O.D. absorbance at 450nm in a microplate reader, and then the concentration of target can be calculated.

**For Research Use Only.** Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
