Application Data

Proximity Ligation Analysis of protein-protein interactions between ARRB2 and PPM1B HeLa cells were stained with anti-ARRB2 rabbit purified polyclonal 1:1200 and anti-PPM1B mouse monoclonal antibody 1:50. Each red dot represents the detection of protein-protein interaction complex, and nuclei were counterstained with DAPI (blue).

WB (Western Blot)

Western blot analysis of PPM1B over-expressed 293 cell line, cotransfected with PPM1B Validated Chimera RNAi ((Lane 2) or non-transfected control (Lane 1). Blot probed with PPM1B monoclonal antibody. GAPDH (36.1kD) used as specificity and loading control.

**IP (Immunoprecipitation)**

Immunoprecipitation of PPM1B transfected lysate using PPM1B monoclonal antibody and Protein A Magnetic Bead, and immunoblotted with PPM1B monoclonal antibody.

**IF (Immunofluorescence)**

Immunofluorescence of monoclonal antibody to PPM1B on HeLa cell. [antibody concentration 10ug/ml]

**WB (Western Blot)**

Western Blot analysis of PPM1B expression in transfected 293T cell line by PPM1B monoclonal antibody. Lane 1: PPM1B transfected lysate (52.643kD). Lane 2: Non-transfected lysate.

**WB (Western Blot)**

Western Blot detection against Immunogen (46.86kD).

ADDITIONAL INFORMATION

Related Product Information for anti-PPM1B antibody	PPM1B is a member of the PP2C family of Ser/Thr protein phosphatases. PP2C family members are known to be negative regulators of cell stress response pathways. This phosphatase has been shown to dephosphorylate cyclin-dependent kinases (CDKs), and thus may be involved in cell cycle control. Overexpression of this phosphatase is reported to cause cell-growth arrest or cell death.
