ADDITIONAL INFORMATION

Related Product Information for ERBB3/HER3 elisa kit	This HER3/ERBB3 ELISA Kit, Human is an enzyme-linked immunosorbent assay for the quantitative measurement of Human HER3/ERBB3 protein in Serum. It contains recombinant Human HER3/ERBB3, and antibodies raised against the recombinant protein. This ELISA kit is complete and ready-to-use. Background: ErbB3, also known as Her3(human epidermal growth factor receptor3), is a member of the epidermal growth factor receptor (EGFR) family of receptor tyrosine kinases. This membrane-bound glycoprotein has a neuregulin binding domain but has not an active kinase domain., and therefore can not mediate the intracellular signal transduction through protein phosphorylation. However, its heterodimer with ErbB2 or other EGFR members responsible for tyrosine phosphorylation forms a receptor complex with high affinity, and initiates the related pathway which lead to cell proliferation or differentiation. ErbB3 has been shown to implicated in numerous cancers, including prostate, bladder, and breast tumors. This protein has different isoforms derived from alternative splicing variants, and among which, the secreted isoform lacking the intermembrane region modulates the activity of membrane-bound form.
