

CLL-1/CLEC12A recombinant protein

CLL-1/CLEC12A Protein, Mouse, Recombinant (His Tag), HPLC-verified

CATALOG #
AAA259252

HOST
HEK293 Cells

PRODUCT SYNONYMS

CLL-1/CLEC12A; CLL-1/CLEC12A Protein; Mouse; Recombinant (His Tag); HPLC-verified; C-type lectin domain family 12; member A; CLL-1 Protein; D230024O04 Protein; KLRL1 Protein; Micl Protein; CLL-1/CLEC12A recombinant protein

PRODUCT SPECIFICATIONS

Host	HEK293 Cells
Purity/Purification	>= 95% as determined by SDS-PAGE. = 95% as determined by SEC-HPLC.
Form/Format	Lyophilized from sterile PBS, pH 7.4. Normally 5%-8% trehalose, mannitol and 0.01% Tween80 are added as protectants before lyophilization.
Species	Mouse
Predicted N Terminal	His
Endotoxin	<1.0 EU per ug protein as determined by the LAL method.
Protein Construction	A DNA sequence encoding the Mouse CLEC12A (NP_808354.1)(Tyr65-Arg267) was expressed, with a polyhistidine tag at the N-terminus.
Preparation and Storage	Samples are stable for up to twelve months from date of receipt at -20 degree C to -80 degree C. Store it under sterile conditions at -20 degree C to -80 degree C. It is recommended that the protein be aliquoted for optimal storage. Avoid repeated freeze-thaw cycles.

ADDITIONAL INFORMATION

Related Product Information for CLL-1/CLEC12A recombinant protein	CLEC12A is a member of the C-type lectin/C-type lectin-like domain (CTL/CTLD) superfamily. Members of this family share a common protein fold and have diverse functions, such as cell adhesion, cell-cell signaling, glycoprotein turnover, and roles in inflammation and immune response. CLEC12A is a negative regulator of granulocyte and monocyte function. Several alternatively spliced transcript variants of this gene have been described, but the full-length nature of some of these variants has not been determined. C-type lectins are the most diverse and prevalent lectin family in immunity. Using a novel CLEC12A -specific monoclonal antibody, experiments had shown that human CLEC12A was expressed primarily on myeloid cells, including granulocytes, monocytes, macrophages, and dendritic cells. Although CLEC12A was highly N-glycosylated in primary cells, the level of glycosylation was found to vary between cell types. CLEC12A surface expression was down-regulated during inflammatory/activation conditions in vitro, as well as during an in vivo model of acute inflammation. This suggests that CLEC12A may be involved in the control of myeloid cell activation during inflammation.

NCBI AND UNIPROT INFORMATION

NCBI GI #	29244122
NCBI GeneID	232413
NCBI Accession #	NP_808354.1
NCBI GenBank Nucleotide #	NM_177686.4
UniProt Accession #	Q504P2 ; Q8BN96
Molecular Weight	30,757 Da
NCBI Official Full Name	C-type lectin domain family 12 member A
NCBI Official Synonym Full Names	C-type lectin domain family 12, member a
NCBI Official Symbol	Clec12a
NCBI Official Synonym Symbols	Micl; CLL-1; KLRL1; D230024O04
NCBI Protein Information	C-type lectin domain family 12 member A; C-type lectin-like molecule 1; myeloid inhibitory C-type lectin-like receptor
UniProt Protein Name	C-type lectin domain family 12 member A
UniProt Gene Name	Clec12a
UniProt Synonym Gene Names	Micl; CLL-1; MICL
UniProt Entry Name	CL12A_MOUSE

For Research Use Only. Not for use in diagnostic or therapeutic procedures. Small volumes of product may become entrapped in the seal of the vial during shipment and storage; if necessary, briefly centrifuge the vial on a tabletop centrifuge to dislodge any liquid in the cap.
