Background: CCL26, also known as Eotaxin-3, is a CC chemokine that functions as a chemoattractant for eosinophils and activated T cells through interactions with CCR3.

Principle of the Assay: The Human CCL26 ELISA (Enzyme-Linked Immunosorbent Assay) kit is an in vitro enzyme-linked immunosorbent assay for the quantitative measurement of Human CCL26 in Cell Culture Supernates, Serum, Plasma. This assay employs an antibody specific for Human CCL26 coated on a 96-well plate. Standards and samples are pipetted into the wells and CCL26 present in a sample is bound to the wells by the immobilized antibody. The wells are washed and biotinylated anti-Human CCL26 antibody is added. After washing away unbound biotinylated antibody, HRP-conjugated streptavidin is pipetted to the wells. The wells are again washed, a TMB substrate solution is added to the wells and color develops in proportion to the amount of CCL26 bound. The Stop Solution changes the color from blue to yellow, and the intensity of the color is measured at 450 nm.
