ADDITIONAL INFORMATION

Related Product Information for anti-MSN antibody	The ezrin, radixin, and moesin (ERM) proteins function as linkers between the plasma membrane and the actin cytoskeleton and are involved in cell adhesion, membrane ruffling, and microvilli formation. ERM proteins undergo intra or intermolecular interaction between their amino- and carboxy-terminal domains, existing as inactive cytosolic monomers or dimers
Product Categories/Family for anti-MSN antibody	Primary Antibody
